Lab#13Create a HTML form that accept the student data like enrollment number, name, email id, password, confirm password, phone number, address, gender, choices of branch and perform client-side validation using JavaScript.

TAGS / SELECTORS USED	ATTRIBUTES / PROPERTIES USED	DESCRIPTION
<!doctype html>	—	Declares the document as an HTML5 document.
<html>	lang="en"	Root element of the HTML document and specifies the language as English.
<head>	—	Contains metadata and information about the webpage.
<meta>	charset="UTF-8"	Specifies the character encoding of the document as UTF-8.
<meta>	name="viewport", content="width=device-width, initial-scale=1.0"	Makes the webpage responsive on different screen sizes.
<title>	—	Specifies the title displayed in the browser tab.
<body>	—	Contains all the visible content of the webpage.
<h1>	—	Displays the main heading STUDENT REG FORM.
<form>	id="studentForm", onsubmit	Defines the student registration form and calls the JavaScript validation function when the form is submitted.
 	—	Inserts a line break between form elements.
<input>	type="text", id="enrollment"	Creates a text field for entering the enrollment number.

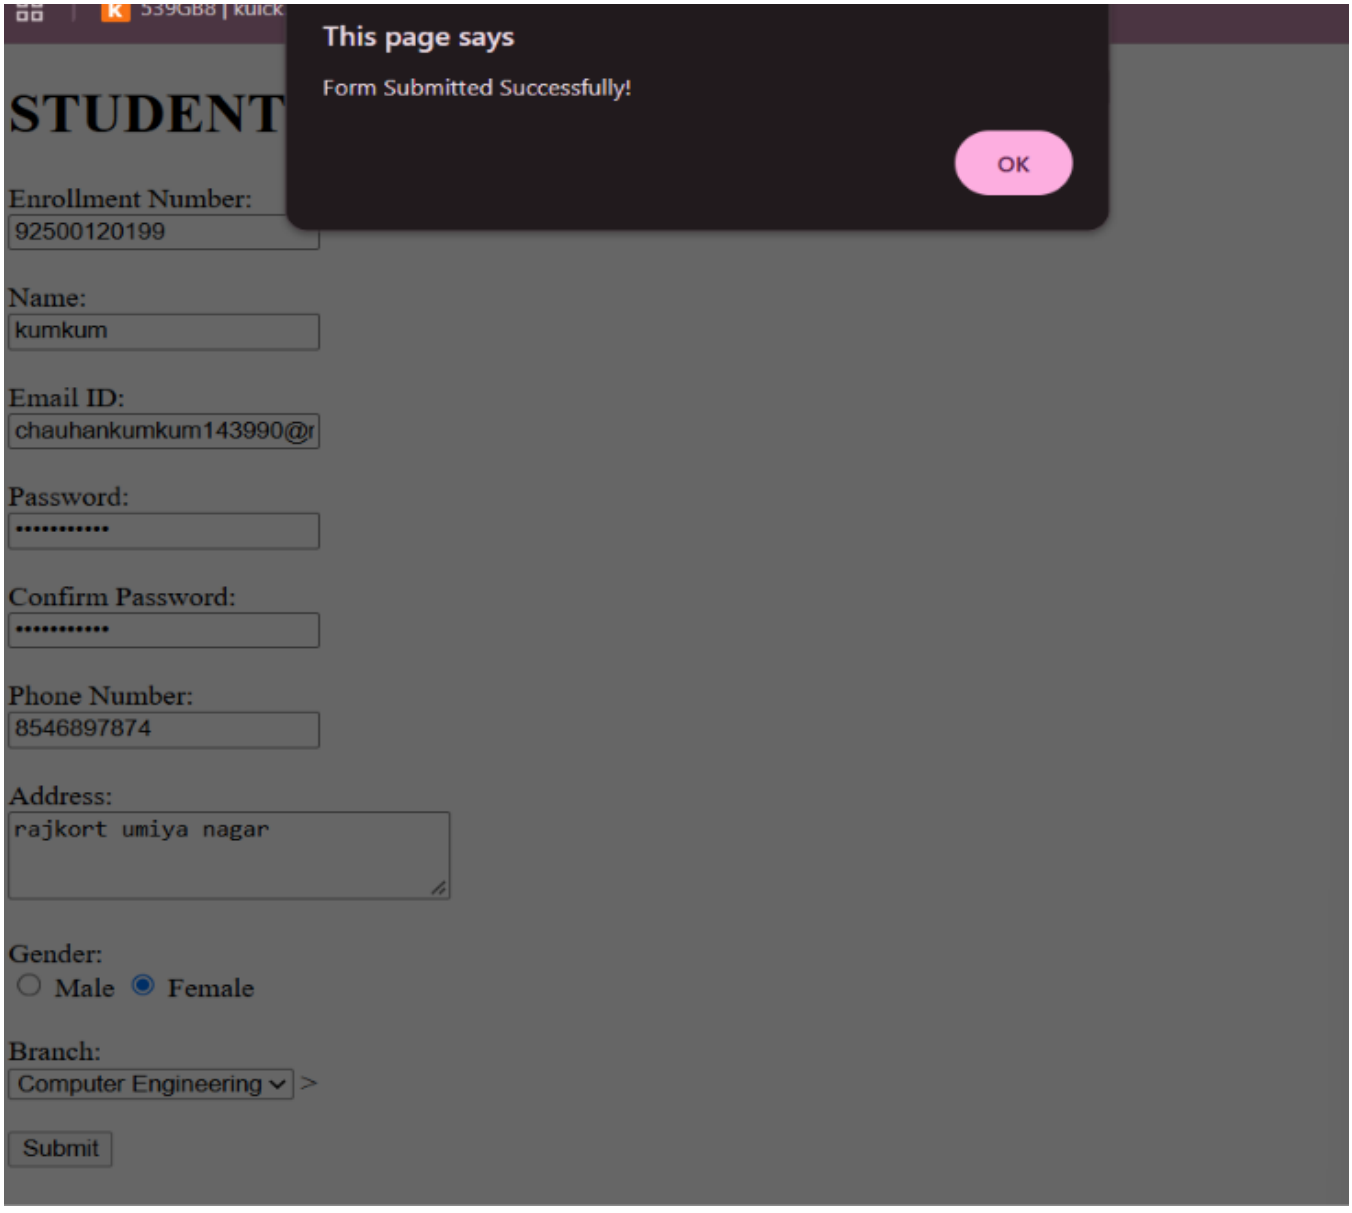

TAGS / SELECTORS USED	ATTRIBUTES / PROPERTIES USED	DESCRIPTION
<input>	type="text", id="name"	Creates a text field for entering the student's name.
<input>	type="email", id="email"	Creates a field for entering the student's email address.
<input>	type="password", id="password"	Creates a password field where entered characters are hidden.
<input>	type="password", id="confirmPassword"	Creates a field for confirming the password.
<input>	type="text", id="phone"	Creates a text field for entering the phone number.
<textarea>	id="address", rows="3", cols="30"	Creates a multi-line field for entering the student's address.
<input>	type="radio", name="gender", value	Creates radio buttons for selecting the student's gender.
<select>	id="branch"	Creates a dropdown list for selecting the student's branch.
<option>	value	Defines individual options inside the branch dropdown list.
<input>	type="submit", value="Submit"	Creates the Submit button used to submit the registration form.
<script>	—	Contains the JavaScript code used for form validation.
validateMyform()	—	JavaScript function that validates all the form fields before submission.
getElementById()	"enrollment", "name", "email", etc.	Selects HTML elements using their unique id.
.value	—	Retrieves the value entered or selected in a form element.

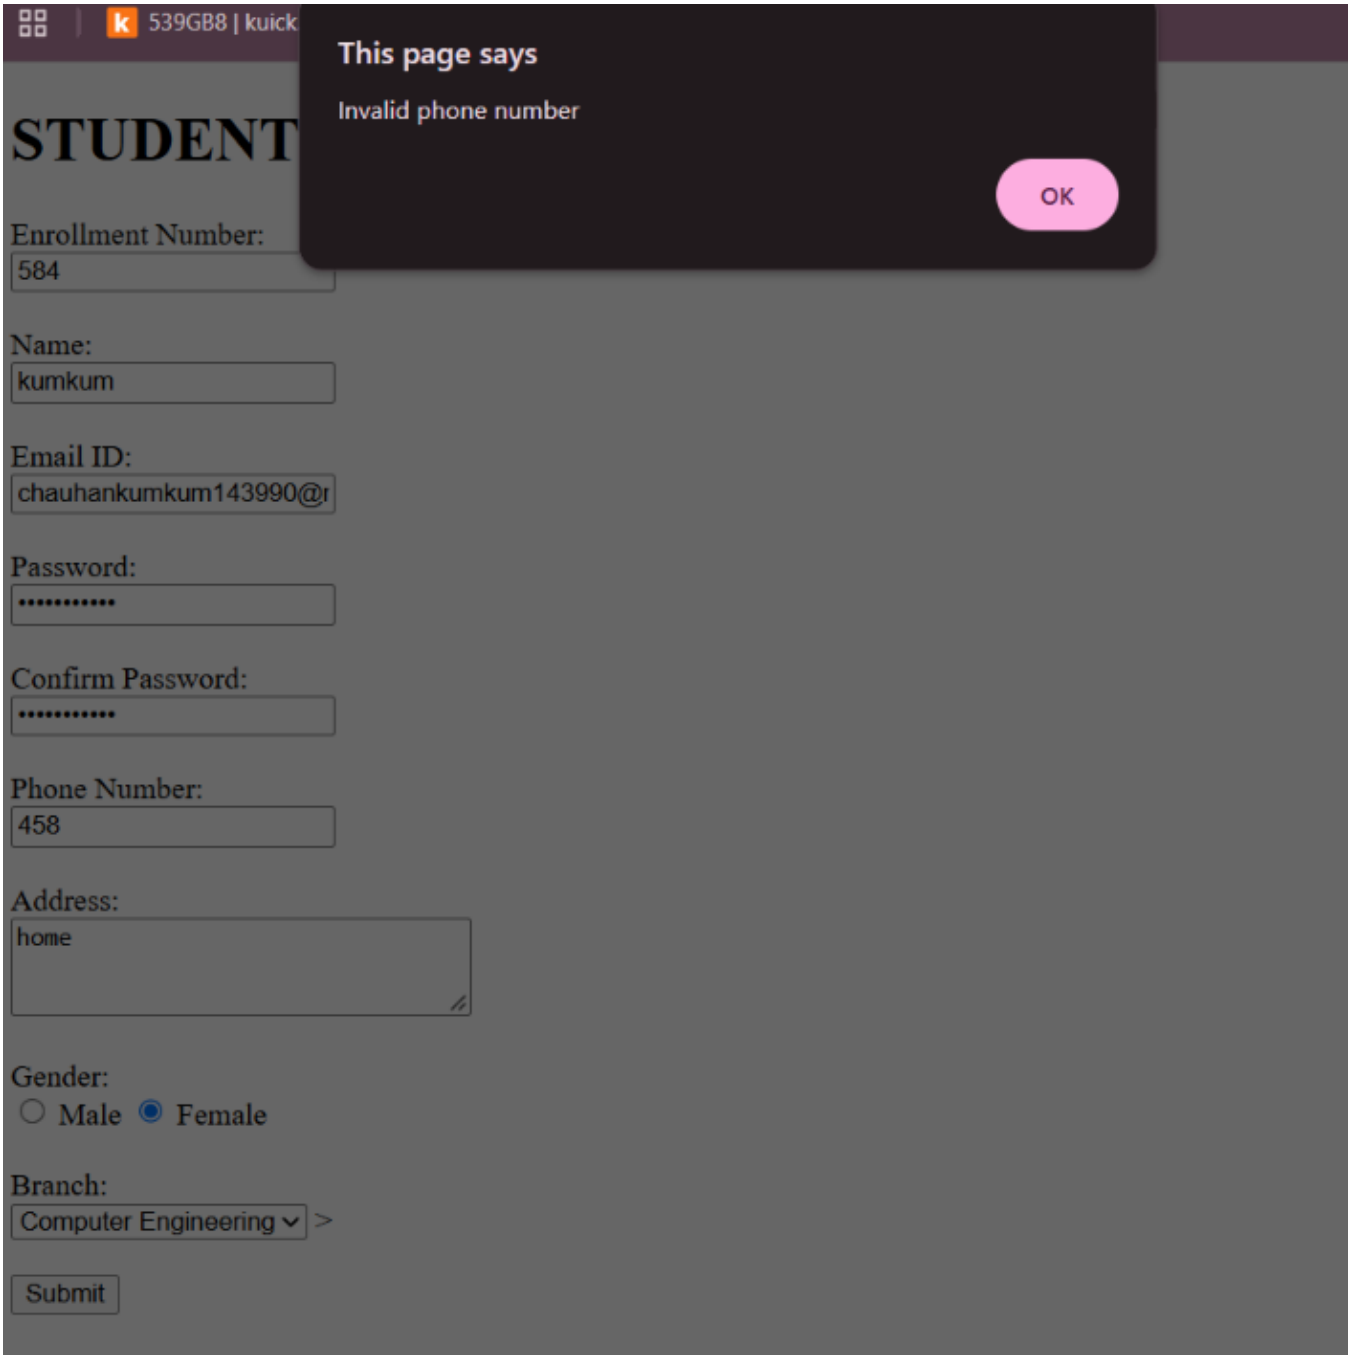

TAGS / SELECTORS USED	ATTRIBUTES / PROPERTIES USED	DESCRIPTION
querySelector()	input[name="gender"]:checked	Selects the currently selected gender radio button.
if	—	Checks whether the entered form data satisfies the required conditions.
alert()	Message	Displays validation messages or the successful submission message.
return false	—	Stops the form from being submitted when invalid data is entered.
return true	—	Allows the form to be submitted when all validation conditions are satisfied.
Regular Expression	/^[0-9]{10}$/	Validates that the phone number and enrollment number contain exactly 10 digits.
Regular Expression	/^[a-zA-Z]+$/	Validates that the name contains only alphabets and spaces.
Regular Expression	Email pattern	Validates whether the entered email follows the required university email format.
password.length	—	Checks the length of the entered password.
password !== confirmPassword	—	Checks whether the password and confirm password are different.
document.getElementById()	"password", "phone", etc.	Retrieves specific form elements from the HTML document using their IDs.

JavaScript selectors/functions used

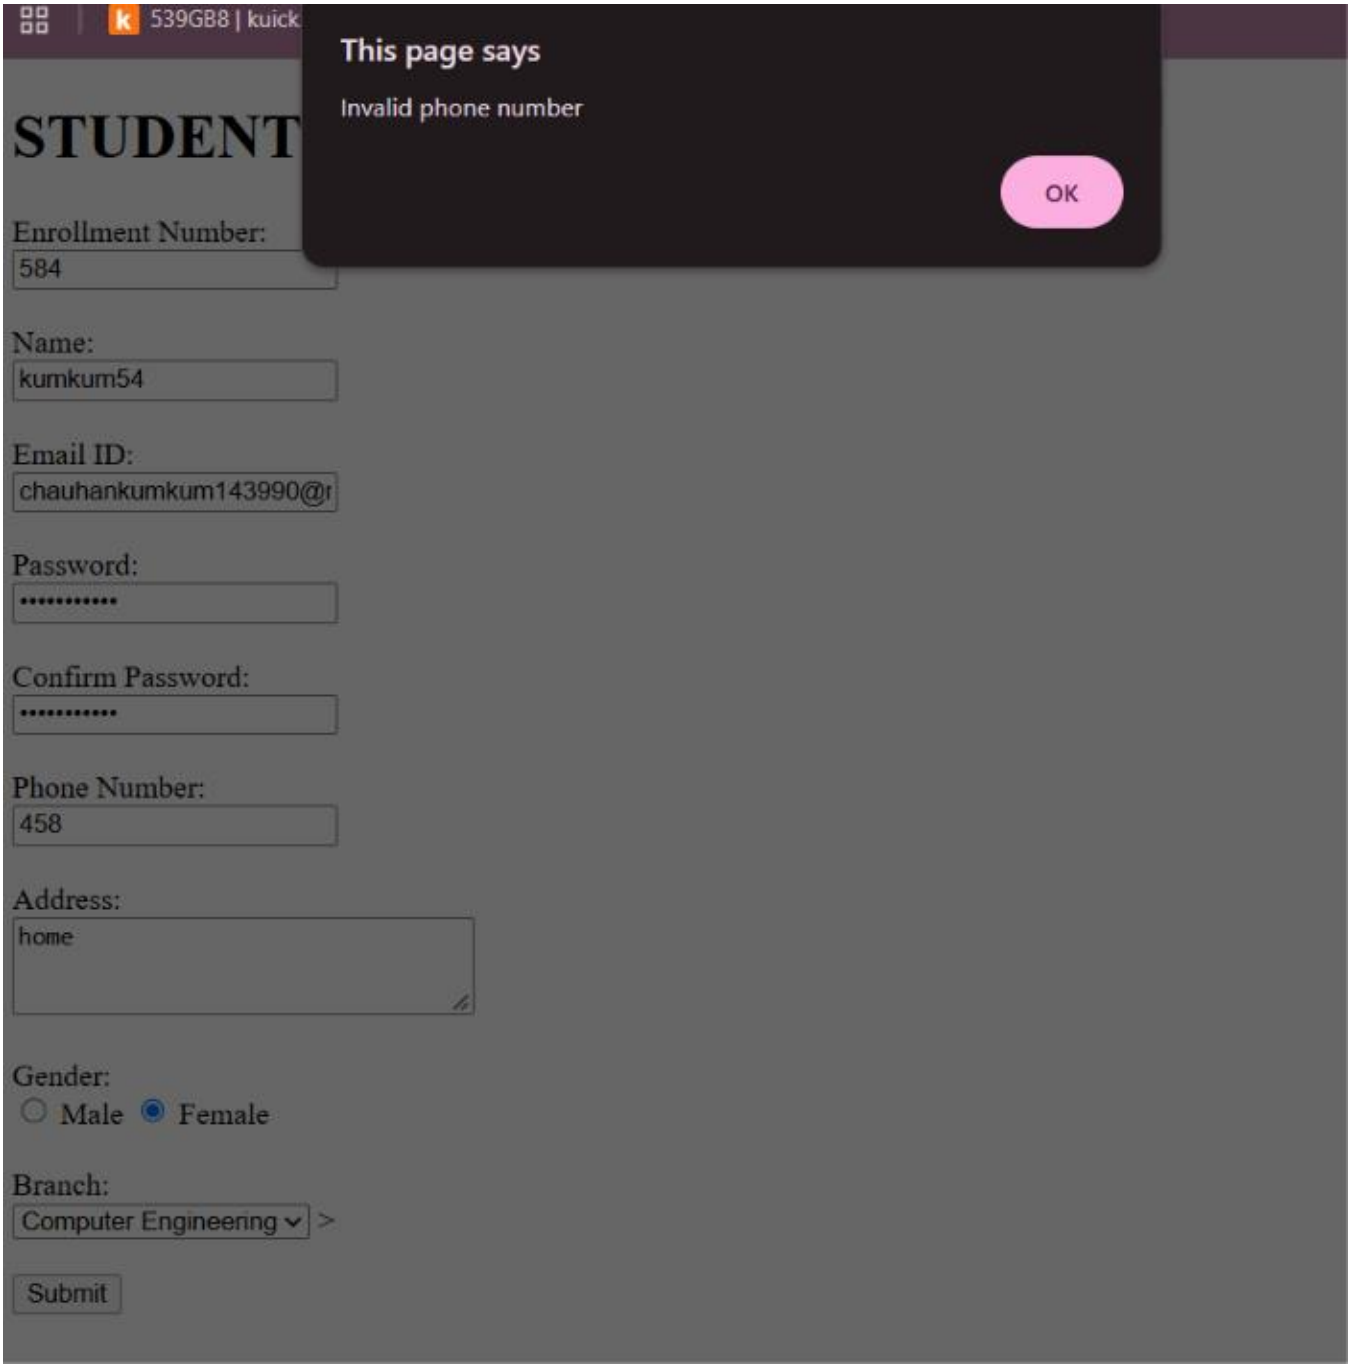

SELECTOR / FUNCTION	DESCRIPTION
document.getElementById("enrollment")	Selects the enrollment number input field.
document.getElementById("name")	Selects the name input field.
document.getElementById("email")	Selects the email input field.
document.getElementById("password")	Selects the password field.
document.getElementById("confirmPassword")	Selects the confirm password field.
document.getElementById("phone")	Selects the phone number field.
document.getElementById("address")	Selects the address textarea.
document.querySelector('input[name="gender"]:checked')	Selects the selected gender radio button.
document.getElementById("branch")	Selects the branch dropdown.
=== ""	Checks whether a field is empty.
!gender	Checks whether no gender radio button is selected.
.match()	Checks whether a value matches a specified regular expression.
.length	Returns the number of characters in the password.
!==	Checks whether two values are not equal.

Final Outcome:
